

Risks and Rewards of Lone Worker Safety Devices

Publication

8.11.20

In a bylined article published by *Industrial Hygiene in the Workplace*, **Lariza Hebert** explains that some employers are using technological devices to help provide safer work environments for “lone workers” who perform tasks carried out in isolation from other employees. Lariza explains the theory behind using “lone worker devices” while also explaining the potential legal risks that employers should be aware of if they provide such a device to employees.
