

What Construction Employers Need to Know About the Most Frequently Cited OSHA Standards

Publication

12.02.20

In a bylined article published by *Construction Executive*, **Curt Moore** provides important information for employers related to three of the most frequently cited Occupational Safety and Health Administration (OSHA) construction standards: fall protection, ladders and trenching hazards. Given the risks associated with working from heights, on ladders, and in excavations, Curt provides the common requirements for each of these areas and recommends strategies to improve employee compliance.
