

MSHA Violations Tracker

[Microsoft Power BI](#)

This MSHA Violations Tracker includes a comprehensive dataset of violations that have occurred since January 1, 2022 as reported by the Department of Labor.

The *Violations by Negligence Level* graph provides a breakdown of violations by negligence level as defined by 30 C.F.R. Part 100. For more information on negligence level, please review [Mining MSHA - What is Negligence?](#)

The *Violations by S&S Designation* pie chart indicates whether or not the gravity is determined by the inspector to be significant and substantial. If this is a Yes, the inspector has indicated that based upon the particular facts surrounding the violation there exists a reasonable likelihood the hazard contributed to or will result in an injury or illness of a reasonably serious nature.

The *Violations by Mine Type* visual shows the percent of mine types in our dataset and the percent of violations issuance to each of those mine types, which allows for a comparison of violations by mine type based on the number of mines in each category

The *Violations by Type of Issuance* table provides a count of the type of issuance by Section of the Mine Act which is the authority for the action taken as well as a breakdown of those violations by negligence level.

For substantive inquiries about the data, please contact a team member of the [Mine Safety & Health](#) practice group or your Fisher Phillips attorney. For media inquiries, please contact [Meghan Warin](#) or [Jenna Gatski Einstein](#).
