AI and Technology Risks for Healthcare Employers

Publication

11.12.19

Automation will create a seismic shift to the workplace, this much we know. The breadth and scope of the impact, however, will vary across industries. For some, artificial intelligence (AI) will create a collaborative partnership rather than displacement. The healthcare industry is primed for such a partnership. However, automation does not come without risks, including privacy issues. In a bylined article in *Healthcare IT Outcomes*, Paul Goatley outlines the risks that come with electronic healthcare data and potential AI biases. In his conclusion, Goatley states, "[e]nsuring 'good' data is used in automated employment tools, and that management is properly trained on how to use such data, can reduce any resulting risks."
