

AGC's Advanced Safety Management Training Course

Event

4.22.15

Howard Mavity will again participate as one of three Instructors at AGC's Advanced Safety Management Training Course in Arlington, Virginia on April 22-24, 2015.

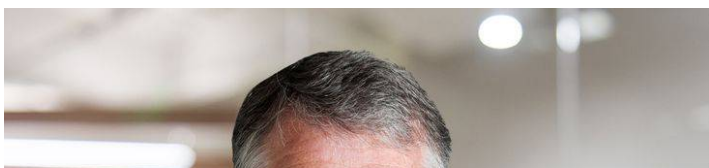

The AGC Advanced Safety Management Training Course (ASMTC) is the highest level of AGC's safety management training program and is recommended for upper level safety and risk management professionals and executives. Much of the learning is accomplished through in and out of class exchanges with peers from some of the nation's largest and best contractors. Longtime lead instructors, Jim Goss and Bob Emmerich PE, are nationally recognized and experienced instructors and safety and civil consulting experts. Practical recommendations and exercises will be mixed with upper level technical discussions and frequent discussion of the legal implications of decisions and programs. Participants receive intensive instruction and training that will allow them to return to their firms with readily applicable new skills to positively impact their company's safety and health program. Many contractors have sent multiple attendees to the ASMTC sessions.

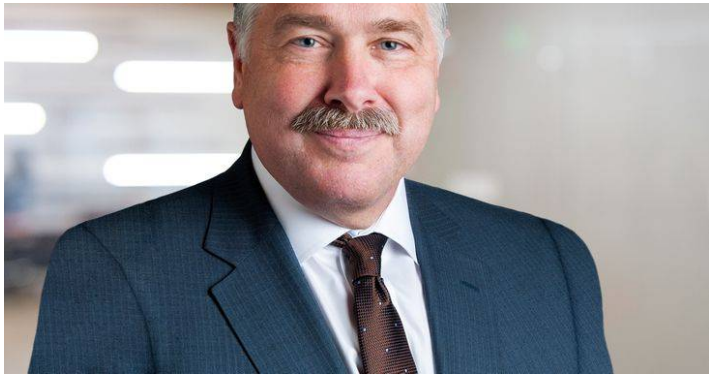

Topics Covered Include:

- Managing a Field Safety Program
- Training Supervisors
- Recordkeeping Requirements and Best Practices
- Legal Aspects of Construction Safety
- Insurance and Risk Management
- How to Handle Multi-Employer Worksites
- Crisis Management Tactics
